Repair-Service

The repair of high-quality measuring equipment is always recommended from an economic and environmental point of view. Many customers want to continue using devices that have served the company well for years. In addition, there are no adequate replacements on the market for many long-serving measuring devices and thus no comparable new devices. Cost-effective repairs often save expensive new purchases or time-consuming conversions of existing equipment. As a customer, you can benefit in this context from our comprehensive know-how in the repair of measuring instruments. Thanks to our many years of experience in this field, we can ensure all-round professional execution of your orders.

Avoid unnecessary costs - Use our repair service!

Calibration service

Sometimes everything just has to fit, either according to ISO or DAkkS. You decide, and we ensure that your requirements are met precisely and reliably with high quality. Calibration can be performed for new measuring instruments as well as for repeat testing of your existing measuring instruments. If we have your device and your order, we need on average less than 14 calendar days (incl. weekends) for a calibration in our own laboratory for measuring devices in Grevenbroich. You are in a particular hurry? For the majority of our measuring instruments, we also offer an "express calibration service", in which we calibrate your measuring instruments within five to a maximum of nine days (depending on the device and the effort involved) for a moderate additional charge once the order has been placed and the corresponding devices have been received.

We offer you favorable prices - feel free to compare.

Replacement-Service

Save money with our Replacement Service. When returning older and/or defective measuring devices purchased from us, we can offer you equivalent new devices at particularly favorable prices.

We will be happy to receive your message by email and advise you!

Life-extending-Measure

Regular calibration and regular functional tests in a professional laboratory are worthwhile! This is the only way you can really be sure that your measuring device works perfectly and delivers exact measurement results. With our "Life-extending-Measure" service, you are always on the safe side. For compliance with legal regulations or as proof in the course of measurements for customers, annual calibration is recommended and, depending on the device, also mandatory. Records of the frequency and scope of such tests must be kept as proof of monitoring. This also includes the metrological calibration certificate for the measuring instrument, which can be used as a guide. This results in a ' Life-extending measure ' for your measuring equipment.

Individual support for technical questions.

If you have any technical questions, our team will be happy to assist you.
